

The Star Of EnerGuide.

When you have an Energy Star[®] home you can take comfort in knowing that your home is so energy efficient it receives an excellent EnerGuide rating. An Energy Star[®] compliant home will save on energy costs and create a more comfortable living environment.

Here's What Makes Your Bayfield Meadows Home an Energy Star[®] Home.

☆ Increased attic insulation. Heat rises so we've increased the insulation to keep it from escaping through the roof.

☆ Low E Argon windows & patio doors with insulated spacers. This glass reduces condensation, reflects sunlight away in the summer and keeps heat in during the winter.

☆ Increased wall insulation. Better heat retention throughout the home, as well as reduced noise penetration.

☆ Full height basement insulation. Provides an insulation blanket for decreased heat loss and a more comfortable future living space.

☆ Compact fluorescent lighting. A more cost effective way to light the home.

☆ The Air handler unit. has variable speeds for more efficient, quieter climate. This unit exchanges fresh outside air for stale interior air while retaining the heat from the exhaust air. This provides an energy efficient, healthier home, and helps control humidity.

☆ Sealed duct work. This provides a more efficient flow of heating and air conditioning for a more comfortable home.

☆ Programmable thermostat. Take advantage of the furnace capability with a fully programmable thermostat that allows efficient comfort settings.

Energy Star[®] Labeled. Independent third party verification that guarantees your Energy Star[®] home meets or exceeds all requirements of the Energy Star[®] program.
